

Virtualization Solutions

Deliver High Availability and Dynamically Allocated Resources

PLATFORM SOLUTIONS

Increase the efficiency and cost-effectiveness of your IT operations

With today's economic and environmental pressures, virtualization continues to lead the way in helping organizations do more with less. Platform Solutions' virtualization solutions, anchored by industry leader VMware, help companies extend their infrastructure, while showing a demonstrable and quick return on investment – easy to justify when times are tough. We can help you build a dynamic virtual infrastructure with the most widely-deployed production-proven virtualization solutions.

Disaster Recovery

With our virtualization solutions for disaster recovery, you get automated recovery that helps eliminate manual recovery processes and reliable recovery that is easy to test and hardware independent. We can help you create an affordable disaster recovery solution for comprehensive infrastructure protection. Disasters come in all shapes and sizes—we help you prepare for all of them.

Server Consolidation

With server consolidation, it's not a matter of whether you'll save money - it's a matter of when. We can help you increase server utilization to reduce your hardware requirements and your operating costs, including energy costs, as well as eliminate server sprawl and platform dependencies. Overall, we can help you reduce server hardware and operating costs by as much as 50%.

Desktop Virtualization

With desktop virtualization, you can lockdown and control virtual desktops centrally. You're able to respond quickly and provision new virtual desktops in minutes or automatically shift more computing power to users – helping to dramatically cut your operational and downtime costs.

Go Green. Consolidate servers. Reduce energy consumption. Increase IT capacity. Reduce CO2 emissions.

With virtualization, reducing hardware and energy costs is already in your power. That's because when one server does the job of 15, you vastly increase your datacenter's utilization rates while decreasing energy consumption. Plus, every server virtualized has the same environmental impact as taking 1.5 cars off the highway.

Platform Solutions: Your go-to Virtualization partner.

Platform Solutions, an accredited VMware partner provides proven best practices and guidance by virtualization experts who assess, plan, design, build and optimize customers' virtual infrastructure environments—maximizing investment throughout the deployment lifecycle.

- Adopt - Get off to a successful start with proof-of-concept engagements, training and assessments
- Expand - Design, plan, build and validate your VMware Infrastructure with world-class experts who will help you achieve time to value
- Standardize - Efficiently optimize and manage your VMware Infrastructure as you build a scalable, global virtual environment

Discover how Platform Solutions and VMware can help you improve your business success, while saving you money. Schedule a complimentary Virtualization Assessment today to better understand how this solution can help do more with less.

Why Platform Solutions?

Key Benefits

- Certified technical team with extensive real-world experience
- Strong focus on customer service and satisfaction
- Broad technology profile
- Partnerships with industry-leading technology manufacturers
- Knowledge and understanding of manufacturer programs and promotions

Solutions

Advanced Networking

- Networked storage and enterprise computing integration
- Service-provider class network design and implementation
- Unified communications
- Network security
- Network management
- Wireless network assessment, design and implementation

Security

- Assessments, penetration testing
- Network and system security
- Compliance
- Policy development and management

Storage

- Information lifecycle management
- Storage compliance requirements
- Optimized WAN storage
- Enterprise backup
- Disaster recovery
- Business continuity

Virtualization

- Server and desktop virtualization strategies
- Data center
- Storage integration

Application Infrastructure

- Email and directory services
- Application delivery
- Server monitoring technology
