

I² Threat Protection System

Quick, Intelligent & Precise Threat Protection

PLATFORM SOLUTIONS

An Integration of McAfee[®] Network Security Platform (formerly IntruShield[®] Intrusion Prevention System) and ArcSight Threat Response Manager

Security can be a complicated maze of layered products that rarely interact and work together. Deploying an array of security solutions to protect your perimeter and hosts does not stop threats from originating inside your network. Network security hinges on how you integrate security and network solutions to create a comprehensive, seamless security system that enables you to take quick, precise and decisive action.

Through innovative integration of ArcSight Threat Response Manager (TRM) and McAfee Network Security Platform (formerly IntruShield Intrusion Prevention System) technologies, Platform Solutions has architected a comprehensive Integrated Intelligent (I²) Threat Protection System to leverage IPS capabilities across your existing network and security infrastructure. This innovative solution will save you time and money.

With I² Threat Protection System you can quickly identify security threats and make intelligent, informed decisions on how to take action against threats, including:

- Blocking and quarantining high security threats
- Escalating threats to management for authorization for critical assets
- Leveraging your existing network and security infrastructure

This powerful, integrated solution enables you to address ever-changing DDOS, virus, worm, and botnet-based attacks quickly and accurately to minimize the proliferation of security threats.

With I² Threat Protection System you:

- ▶ Have ONE view of your environment from a single point of control
- ▶ Can act on threats with ONE click
- ▶ Can stop threats in less than TWO minutes

The Power & The Vision

Too often you can identify a threat within your network, but through limited network visibility, you lose valuable time trying to detect its exact location. The I² Threat Protection System enhances your capabilities to strengthen your security profile, while saving time and easing the burden on your resources. Through IntruShield's powerful ability to detect and block a threat and TRM's vision to pinpoint the specific location of the threat, you will have eyes and ears throughout your entire environment. You can use IntruShield to instruct

TRM on how to stop a threat deep inside the network. The IntruShield Manager directly integrates with TRM to enable one-click action against threats, virtually extending the power of your IPS to all your network devices.

Key Benefits

I² Threat Protection System

- Quick, intelligent and precise threat identification and action
- Ability to leverage your existing network components to support security initiatives
- Obtain ONE view of your environment from a single point of control
- Act on threats with ONE click
- Stop threats in less than TWO minutes

McAfee IntruShield Network Intrusion Prevention System

- Provides comprehensive, scalable, accurate and intuitive management of IPS policies and appliances
- Proven management of IPS configuration, policy, attack blocking and response actions for small or large Network Security Manager deployments
- Prioritized visual tracking of suspicious attack activity for accurate protection of your most critical network assets
- Centralized at-a-glance dashboard gives you a complete threat and system summary in seconds, while our real-time alert manager offers single-click navigation to alert and attack information

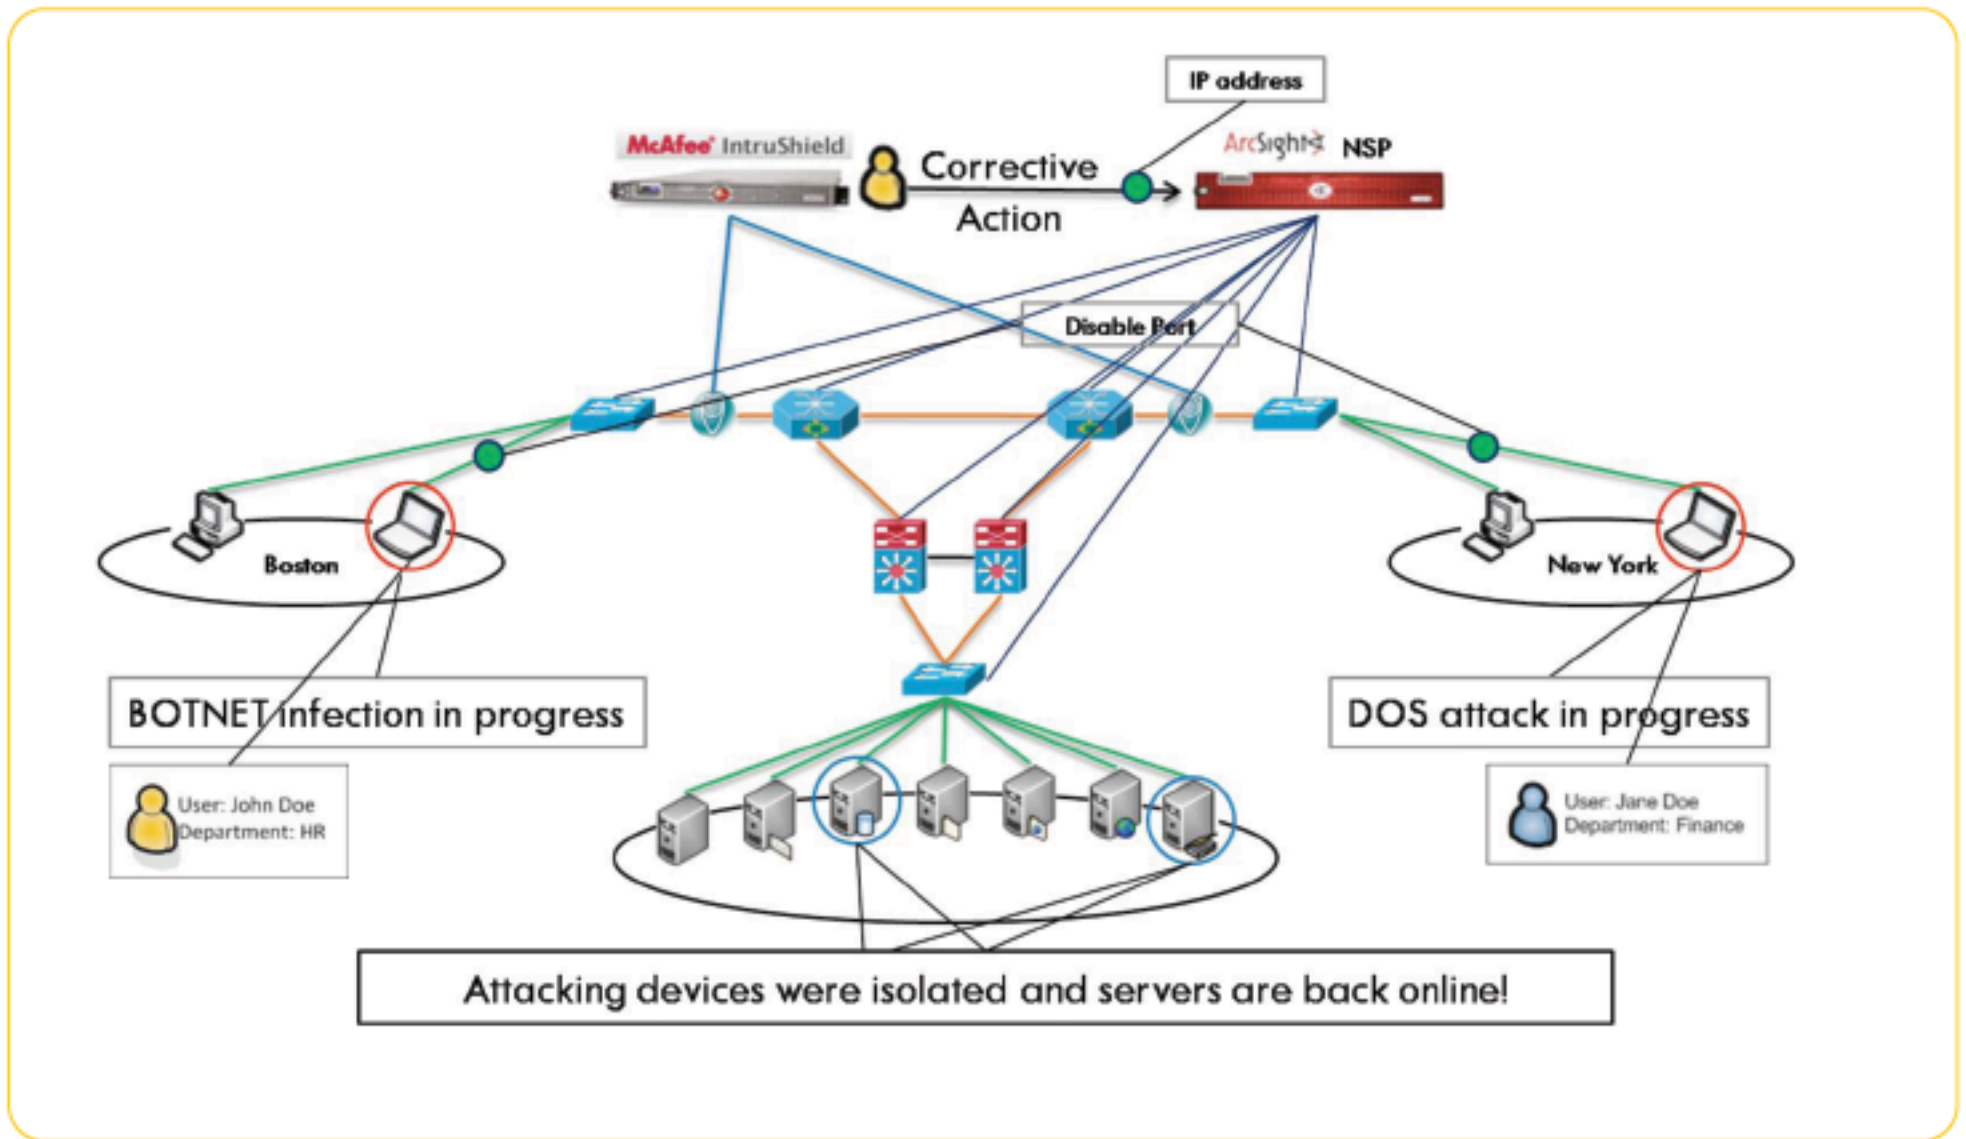

ArcSight Threat Response System

- Pinpoints the exact location of threats on your network and presents available response actions
- Allows the operation to respond immediately with specific, policy-based actions within a self-documenting and auditable framework
- Response actions can include:
 - Disabling the source of the threat, including changing user privileges and turning off access rights for the suspicious user accounts
 - Limiting the actions that are possible from a suspicious source
 - Placing systems in separate out-of-band networks/VLANs
 - Taking a complete snapshot of the suspicious system for forensic analysis

Platform Solutions, Inc.

- Comprehensive delivery methodology
- Certified and experienced technical delivery team
- Experience in security, advanced networking, storage and application infrastructure
- Strong industry and manufacturer partnerships
- Excellent customer service
- Nimble and adept corporate culture

I² Threat Protection System Reference Architecture

Platform Solutions’ comprehensive reference architecture and deployment methodology enables you to quickly deploy the I² Threat Protection Solution in your environment. Leveraging our team of industry and vendor-certified security and networking experts, we can help you design, deploy, operate and support a solution that will bring measurable value and benefits to your organization.

“Due to the innate sensitivity of medical information, when it comes to identifying and eliminating security threats, every minute counts. With Platform Solutions’ integration of the McAfee IntruShield and ArcSight TRM solutions, we have been able to quickly and intelligently identify and address threats, reducing our time to response by 80%. As a result, we have been able to save valuable time, resource bandwidth, and most importantly our critical data and information.

Brad Blake - IT Director, Boston Medical Center
